## Building Permits Issued

**Status Date Between 5/23/2022 and 5/29/2022**  
**City: ALL Inc/Uninc: Unincorporated**

BIPVR22-002615 PVR Issued 5/24/2022 \$42,196.00 RESIDENTIAL PV SOLAR, FLUSH ROOF MOUNT, GRID TIED. INSTALL (1) NEW SUBPANEL. MAIN SERVICE CHANGE - 125A, UNDERGROUND 31 panels, 11.78 kW. 42196 220511019 3372 DEER HOLLOW DR DANVILLE

\*\* 5/11/22 REVISION: PV interconnect is proposed as a supply side breaker tie in. Proposed scope of work is the installation of a new 125A rated meter-main combo panel with a 125A main breaker protecting a distribution section of bussing. On that bussing, (1) 125Abreaker will be installed, to feed a new 125A rated subpanel. All existing distribution - (2) 90Abreakers - will be relocated to the new subpanel. Now the new main panel has a 125A mainbreaker upstream, protecting the bussing, and a 125A breaker on the bussing, housing alldistribution loads. The 125A breaker that feeds the distribution panel is now a new servicedisconnect. Per 690.64(A) and 705.12(B)(2), the bussing within the main panel is now on thesupply side of the service disconnect, and PV breakers landed here are subject to standardsupply side 705.12(A) rules. 60A of solar is less than 100% of the panel rating, 125A, sobackfeed ok. This is commonly referred to a as a 'Hawaiian Tie In' for reasons completelyunknown to me. This resubmittal replaces a lug kit feeding the sub with a 125A breaker, acritical piece of redefining the bussing as supply side. A sticker is to be affixed to the panelstating no new loads allowed within the main panel distribution section \*\* JFUREY

5/19/22 REVISION: Interconnect 120% violation: Revised submittal switches interconnect to be a line side tap,performed upstream of the main breaker on a newly installed 125A main service panel. A fused60A AC disconnect is added immediately adjacent to the main panel, and the (1) subpanel to be installed is removed\*\*JFUREY
