

Sanitary Districts

Certain building permit projects will require approval from the Sanitary District or Environmental Health Services prior to permit submittal. Sanitary District staff will review the project plans to ensure that there will be no adverse impacts on the sanitary sewer system and no encroachment into a sanitary sewer easement. Please contact the appropriate district to determine if your project involves any of the following:

- New residences, ADU’s and commercial buildings.
- Residential additions/remodels with new or changed plumbing fixtures.
- Residential and Commercial additions not changing plumbing fixtures.
- Any project that includes excavation work for a foundation or pier, or which upon completion would prevent access to sanitary sewer facilities for routine maintenance and repairs. Examples include new structures, pools, additions, pools, decks, outdoor kitchens, outdoor fireplaces, retaining walls, cabanas, ground mount solar systems, pergolas, and demolitions.
- Septic system conversions and residential sewage pumping.
- Properties with septic systems which are not served by a public sewer.
- All commercial tenant improvement projects will require sanitary approval whether or not plumbing is a part of the project.
- New or modification public pool or spa
- Additions on properties that contain a septic system must be reviewed by Contra Costa Environmental Health.

If any of the above apply, you will need to submit an approved set of plans from the sanitary district and/or Environmental Health as part of your building permit submittal.

	<p>BYRON BETHANY IRRIGATION DISTRICT 7995 Bruns Rd., Byron Serving: Byron</p>	<p>Phone: 209-835-0375</p>
